

Axess protects

With contactless access

E-Commerce succeeds in times of Corona. How an access system can protect health and prevent infection.

The Axess **WEBSHOP** provides a modern online system for the B2C market. It offers the purchase of tickets and other services without any social contact. All conventional payment methods are possible. With the QR-Code on the smartphone or the printed voucher, the passes are issued within seconds at the Axess **PICK UP BOX 600** directly at the resort. Regardless of time or open cashier windows. All products purchased in the online store are transferred. Everything works contactlessly: The code is being scanned and the guests are getting a ticket without ever touching anything. No lines at the cashier, as the Axess **TICKET KIOSK 600** does the same job. The fully equipped vending machine is the new socially distanced cashier. As is the new Axess **TICKET FRAME 600**.

All ticket types can be bought on the new machine in a matter of seconds. It allows to activate tickets by entering the WTP number or print vouchers that can be turned into ticket at the **PICK UP BOX 600**. 24 hours a day without any social contact or health risks. Afterwards the **AX500 Smart Gate NG T&M** covers it perfectly: Axess provides a new solution for health protection at the access. A sensor measures body temperature and a camera detects whether a protective mask is worn. Only then the Axess **SMART SCANNER 600** validates the ticket via RFID technology. Sensors detect the approaching person and trigger the bars to open. No disinfection of hands or additional measures are necessary. Reservations and capacity management is easy with Axess **SMART**

RESERVATION. All services are paid for in the same way as in any other online store. The inquiries from all sales channels are automatically transferred into the Axess **DATA CENTER**. This is where all reservations are being administered. When the process is finished, **SMART RESERVATION** generates and sends the reservation confirmation. Reservations for larger groups are easily done with the group reservation feature. That way guests never have to get in contact with people anymore and don't touch things that could transmit diseases. E-Commerce is the safe sales tool of the future.

AXESS

Axess TICKET FRAME 600

Design: Picture Frame - Function: Ticket Machine

The new Axess **TICKET FRAME 600** sets new standards. The design suggests a picture frame, perfectly hanging on the wall. When not in operation, art or other motives can be displayed. Inside it hides a whole range of functions. Entry tickets, day passes or other tickets can be loaded in seconds with this new machine. The ticket is activated by entering the WTP number of an existing card and payment by credit card. Access to the venue, leisure site or ropeway is immediately given free at the entry. Without an existing card, a voucher with QR-code is printed. The ticket can be collected afterwards at the Axess **PICK UP BOX 600**. Both processes take place without contact with people. Meaning health protection and minimizing the infection risk with the Corona virus. Incidentally, it is clearly the fastest way to get a ticket on site. 24 hours a day.

Axess T&M

Health control at the access. A sensor measures body temperature and a camera detects whether a protective mask is worn.
