

Axess SMART RESERVATION

The innovative reservation system

Axess SMART RESERVATION is the innovative reservation system for various applications. It offers you a back office solution to create and manage inquiries and reservations. This web-based application doesn't require any additional installation. Your guest has a confirmed place in the cable car at a particular time, in the car of a tourist train or in a limited group for a tour.

The inquiries from all sales channels are automatically transferred into the SMART RESERVATION MANAGER software. This is where a reservation is created, edited or changed. When the process is finished, SMART RESERVATION generates and sends the reservation confirmation.

With SMART RESERVATION you always have a clear overview of all reservations and bookings. Reservations for larger groups are easily done with the group reservation feature. B2B partners (such as travel agencies) get their own login and can autonomously make their reservations in the RESERVATION MANAGER.

Axess SMART RESERVATION
