Axess T&M - Temperature & Mask Module

Access only possible with face mask and without fever

Extraordinary situations require extraordinary measures. With the new **AX500 Smart Gate NG T&M** (Temperature & Mask), Axess provides a new solution for health protection. A sensor measures body temperature and a camera detects whether a mouth-nose mask is worn. Only then the gate will

open. Guests enter without having to touch the turnstile or other components of the gate. If the person has a fever or is not wearing a mask, access will be refused, even if the ticket has already been paid for. This function is important for pools, museums, stadiums, exhibition centers or amusement

parks as well as restaurants in resorts and allows organizers and operators to open their doors again within the new legal conditions. The new module can be easily integrated into all product lines. This guarantees that only healthy people have access to the respective facility.

In short

- › Health check
- › Built-in fever thermometer and mask check
- › Non-contact access through the gate
- › Buy tickets online without contact
- › Assembly of single gates or in rows next to each other
- › Optional: panic function for escape routes
