AXESS

AX500 Smart Gate NG BLE

Bluetooth turns your smartphone into your ticket

The new Axess **Antenna BLE** (Bluetooth-LE) turns your smartphone into a ticket and allows fully contactless entry. First the ticket is booked online at the **WEBSHOP**, where it can be loaded into the user app. As soon as the guest comes into the reading area of the gate his smartphone connects automatically and the ticket is

checked. When validated the gate opens contactlessly - no waiting at the POS, no ticket handling or losing. The **AX500 Smart Gate NG BLE** leads way to a safe future of ticketing and access control with the latest Bluetooth-LE technology. New possibilities of ticket management by almost unlimited ticket information and impressively fast

data transfer are the key.

The new module combines the best out of two worlds: BLE- and HF-technology. Data of guests and their skiing habits and preferences for creating new customer specific offers can be evaluated. Information or advertisement can be sent directly by using push messages.

In short

- › The smartphone becomes the ticket
- › Bluetooth-LE 5.0 and 5.1
- › Fully integrated in Axess CONNECT. APP on IOS and Android
- › Optional BLE module for integration in third-party app
- › BLE-related minimal energy consumption of app
- › Secure storage on mobile phones; No ticket loss, damage or misuse by ticket transfer
- › Specially developed HF-BLE-combi antenna with highest localization capability - no 'false ticket readings' from people nearby
- › New possibilities for ticket management by high data transfer rates between gate and app
- › Combined with HF technology: Unrestricted, parallel usage of the ISO 15693 standard
