

A photograph of a large stadium with a complex steel roof structure. In the foreground, a grey Axess SMART POST 600 is visible. The post has a green top, an orange ticket slot, and a screen displaying a welcome message. A black circular sensor is located below the screen. The background shows the stadium's seating and structural elements.

## The elegant doorman for special access

The inviting **Axess SMART POST 600** is the elegant doorman for special entrances. No matter whether guests should have a regular entrance or want the ADA version. Nothing is easier than to pass without a barrier. The **Axess SMART SCANNER 600** reads the ticket (barcode, QR, NFC, RFID) within seconds and signals with red and green light bars whether a ticket is valid. This allows employees to keep

an absolute overview. Equipped with the **Mobile Pallet**, the **Battery Pack** and **WIFI**, the Post is mobile and can be placed anywhere. A quick change of location is possible at any time. It operates for up to 10 hours with a single **Battery Pack** and is immediately ready for use again by exchanging or inserting a new pack. All necessary data transfers are communicated via the **WIFI**. Space-saving, robust and

weatherproof, the **SMART POST 600** is ideally suited for indoor and outdoor use.

With the new **SMART SCANNER 600 NFC**, not only classic data carriers such as chip cards, transponder wristbands, QR codes on Print@Home tickets or e-tickets, also NFC-compatible devices can be used. The smartphone turns into an entry ticket.

### In short

- › For indoor and outdoor use
- › Axess SMART SCANNER 600 NFC
- › Modern, elegant design
- › Optional: IN/OUT sensors for detection of access direction
- › Optional: Mobile Pallet, WIFI and Battery Pack for complete wireless network communication and power supply
