Axess SMART RESERVATION

The innovative reservation system

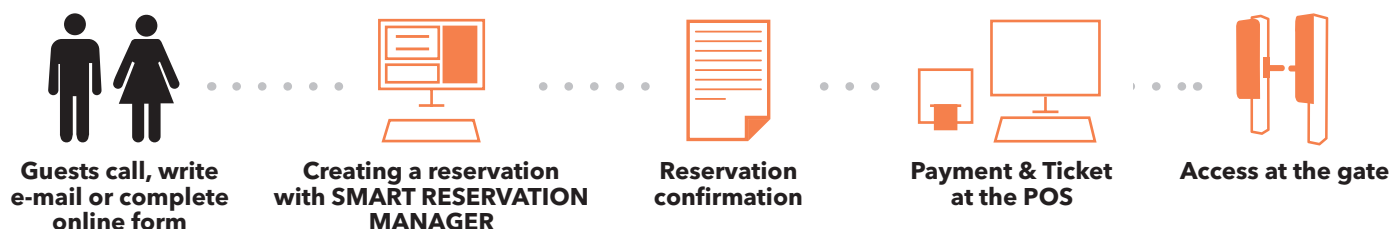

Axess SMART RESERVATION is the innovative reservation system for various applications. It offers a back office solution to create and manage inquiries and reservations. This web-based application doesn't require any additional installation. The guest has a confirmed place in the cable car at a particular time, in a compartment of a tourist train or in a limited group for a tour. The inquiries from all sales channels are automatically transferred into the **SMART RESERVATION MANAGER** software.

This is where a reservation is created, edited or changed. When the process is finished, **SMART RESERVATION** generates and sends the reservation confirmation. **SMART RESERVATION** always ensures a clear overview of all reservations and bookings. Reservations for larger groups are easily done with the group reservation feature. B2B partners (such as travel agencies) get their own login and can independently make their reservations in the **RESERVATION MANAGER**.

In short

- › Reservation management for various applications
- › All sales channels integrated
- › No additional installation required (web-based application)
- › Creation, management and editing of all reservations and contingents
- › Overview of reservations and occupancy at a glance
- › Definable user roles:
Administrator, user, B2B partner
