

A frictionless future for Alamodome

Alamodome has selected Axess as its Access Control partner. The 64,000 seat stadium will install 38 Axess gates across the venue as part of its latest stadium upgrade. **The new gates will ensure the venue is COVID-19 responsible, with speedy contactless entry.**

The multi-purpose Alamodome stadium is the preferred venue for many trade shows, conventions and concerts in the city of San Antonio. It was the home of the NBA World Champion San Antonio Spurs and currently home of to American Football events including the Alamo Bowl and UTSA Roadrunners games.

The facility opened in 1993 at a cost of \$186 million and the most recent addition of Axess gates will keep it at the cutting edge of sports stadia.

The Alamodome is not alone in making preparations to become a COVID-19 responsible venue. The

addition of smart gates will ensure that visitors can access the stadium quickly, cutting down on time waiting in line. Entry is also contactless, both steps that will reduce COVID-19 risk factors.

All gates are WIFI enabled, portable lithium battery powered units, making installation for the venue easy and not requiring a power source.

- 37 AX500 Smart Gate NG Mobile Pallet with Lithium Battery and WIFI
- 1 AX500 Smart Gate NG Flap Glass Mobile Pallet with Lithium Battery and WIFI for ADA and stroller access
