

Masella (Alp 2500):

Covid-19 conform with Axess

The Masella ski resort is located in La Cerdanya, in the Spanish Pyrenees. It is located on the Tosa d'Alp and has joined with the area of La Molina to form one of the largest winter sports areas in the northeast of Spain: Alp 2500. The connection between the two areas was made by the new gondola lift of the same name.

Masella

Spain

Masella offers its guests over seven lifts with a total of 36 slopes, which allow skiing on a total length of over 74 kilometers. Large parts of the area are perfectly suitable for beginners and families, but also experienced skiers will get their money's worth here. Even in the evening you can still have a great time on the slopes, as night skiing is also possible on some slopes thanks to floodlights.

The new ski resort Alp 2500 consists of a total of over 135 kilometers of slopes that can be explored by skiers and snowboarders. The part of La Molina, which is the oldest ski resort in Spain, comes to a total length of 61 kilometers of slopes. With 119 runs, there is guaranteed to be something for everyone here as well.

In order to ensure safe skiing operations for guests during Covid-19, Masella will be relying on smart products from Axess in the future. The Axess **PICK UP BOX 600**, for example, ensures contactless collection of tickets previously purchased online, thus helping to keep contact with strangers to a minimum. Simply hold the code previously received on the cell phone or voucher under the scanner and receive your ticket in seconds and completely contactless.

In addition, 31 **AX500 Smart Gates NG Flap** offer protection by the function to pass through a gate without touching it. This is provided by two sensors that detect when a person approaches and leaves the gate.

Axess HANDHELDS

Axess **SMART PRINTER 600** as well as Axess **HANDHELDS** help additional employees on site to work more efficiently. The **SMART PRINTER 600** impresses not

system prints, erases, codes and reads ISO15693 and ISO 14443 tickets in just one step.

The **HANDHELDS** are used primarily as ticket inspectors and ticket readers. Not only are they particularly robust and weatherproof, their low weight means they can be used effortlessly on the move all day long.

With the replacement of the old systems on site with the innovative products from Axess, the ski resort Masella can now evaluate data obtained at a glance and additionally relieve the employees at the cash desks. The skiers themselves have the highest possible protection against infection through the contactless systems and online sales by complying with Covid-19 regulations. A win-win situation for the operators and guests of the Spanish mountains.
