

Safely up Mount Vesuvius - with Axess!

In times of Corona, everyone but particularly leisure and attractions providers need to pay attention to guidelines when it comes to visitor management. Especially when it comes to when and how many visitors enter a certain area at once. Here, the Parco Nazionale del Vesuvio relies on contactless gates from Axess to optimally regulate the number of guests.

The Parco Nazionale del Vesuvio in southern Italy, opened its doors to visitors for the first time on June 5, 1995. With about 45 km of trails spread over eleven different routes, it offers a breathtaking glimpse of Italy's natural diversity to over half a million tourists from all over the world every year. After the closure, the management decided to use the crisis as an opportunity to modernize the park.

Axess AG provided the National Park with a total of four AX500 **Smart Gates NG** including a platform for easy installation, as well as Axess **SMART SCANNER 600**. These reliable gates provide guests with year-round, contactless access to the recreational adventure. **The SMART SCANNER 600** is the intelligent ticket scanner of the digital future. It reads bar-

code cards as well as RFID tickets, chip cards, wristbands, Print@Home tickets or e-tickets on mobile devices or smartphones. Simply hold the ticket underneath or place it on the reading surface in the generously dimensioned scanning area.

Stefano Donati, Director of the National Park is already a fan of Axess' innovative solutions: „This is a kind of revolution for a destination that, despite its number and importance, was still enjoyed in an old-fashioned way. We have tried in this period of closure to rethink this place, putting the visitor, at the center of all the innovations introduced and focusing on what technology allows us to do today.”
